

Powerful, high-performance measurement solutions

Essential Potentiostats.

Benchmark software. High-performance hardware.

The perfect marriage of performance and control.

Modular, durable, single and multi-channel electrochemical workstations designed to meet both classical and demanding electrochemical research needs, the Essential range features **EIS up to 1 MHz**, with measureable current from **1 A down to 20 nA**, and the possibility of extending up to **800 A with boosters**.

No compromise has been made on quality in a range of potentiostats driven by EC-Lab[®] software, the same control interface that drives BioLogic's Premium instruments.

Advanced functionality such as Ethernet capability will help you manage multiple instruments from one computer as well as facilitate group-working. And **Quality Indicators** make the validation of EIS measurements simple.

Visit our YouTube channel and Learning Centre for scientific articles, EC-Lab[®] tutorials and product support information.

Channel

Essential measurement tools for electrochemists

Specification

Minimum/Maximum
Capabilities

Channels: 1 to 16

Standard Voltage: ± 10 V

Max Voltage: +60 V

Current: 20 nA to 800 A

EIS: Up to 1 MHz

Multichannel

Single channel

Ethernet capability for increased flexibility/improved group working

Share an instrument's channels via multiple PCs, or share multiple instruments from your PC.

The most comprehensive and user-friendly software available

EC-Lab® is widely regarded as the **benchmark control and analysis software** by scientists across the globe. As simple to use as it is powerful, EC-Lab® offers a wide range of unique functionality that can help drive your projects forward.

Preset or bespoke techniques

80+ techniques

Integrated graphics

Customize graphs within EC-Lab®

Experiment sequence builder

Build sequential experiments based on conditional limits

External device control

(multiple devices)

Extensive analysis functionality

Including Z Fit for advanced EIS modeling

No need to plan experiments

Modify measurements "on the fly"

SP-50e: The perfect instrument for education & general use

Channel capability: 1
Voltage: ± 10 V
Current: ± 1 A down to 20 nA

- Highly cost-effective workstation- now with EIS
- Simple, easy-to-use, compact chassis
- Ideal for general use and education - perfect for new researchers
- Exploit the power and performance of EC-Lab[®] with a limited budget

SP-150e: From tens of nA to 800 A The power to do more

- Two channels: perfect for rotating ring disk electrodes (RRDE)
- Highly modular potentiostat. Users can easily add high current boosters (no factory upgrade required)
- Future proof: instrument easily upgraded with EIS and a new channel

Channel capability: 2
Voltage: ± 10 V
Adjustable between -20 V to +20 V
Current: ± 1 A down to 20 nA

VSP: A versatile, 5-channel, research-grade, instrument

Channel capability: 5
Voltage: ± 10 V
Adjustable between -20 V to +20 V
Current: ± 0.4 A down to 20 nA

- Versatile, modular instrument for general needs
- Future-proof: instrument can be easily upgraded with EIS, high current options and new channels
- Optional 4 A booster available

VSP-3e: Tailor-made for energy applications

Channel capability: 8

Voltage: ± 10 V

Adjustable between -20 V to +20 V

Current: ± 1 A down to 20 nA

- Compact, upright design reduces instrument footprint and saves valuable laboratory space
- Future-proof: instrument easily upgraded with EIS, high current options and new channels

VMP-3e: Versatility, power and performance. A do-it-all measurement tool.

Channel capability: 16

Voltage: ± 10 V

Adjustable between -20 V to +20 V

Current: ± 1 A down to 20 nA

- Research-grade instrument with 16 channel capability
- Easily upgraded by user: add channel boards or boosters
- Connect each potentiostat to an external high current booster channel – perfect for battery research/testing
- Ethernet capability via LAN – connect several computers/users to the same unit to facilitate group working

Add-ons: Customize your potentiostat to match your field of interest.

Modules by potentiostat

Options	Specification	Application	SP-50e	SP-150e	VSP	VSP-3e	VMP-3e
High Power booster	<ul style="list-style-type: none">• 20 V boosters: 2, 5, 10, 20 A• ± 3 V at ± 80 A• 5 V at ± 100 A• 60 V at 50 A*• 12 V at 200 A* <p>*Up to 4 boosters can be connected to increase current capability</p>	Battery, supercapacitor, fuel cell, electroplating & electrolysis, Supercapacitor or fuel cell characterization Battery testing Battery pack characterization Large battery cells, supercapacitors or fuel cell characterization					
EIS	Up to 1 MHz	EIS measurements can be made and validated with BioLogic EIS Quality Indicators					

Contour plots.

VMP3 contour plot (example applicable to rest of Essential Potentiostat range)

High Power

Contour plot demonstrating the high-power operating area of the FlexP boosters

Future-proofed potentiostats

Upgrade your own instrument, quickly, in your lab.
So your potentiostat grows with your needs.

Channel Specifications

Features		Essential Specification
EIS capability		10 µHz to 1 MHz
Analog Ramp Generator		N/A
Floating option		CE to Ground
Filters		Software
Acquisition time		20 µs
Electrode connections		2, 3, 4, 5
IR compensation		Manual, EIS, current interrupt (software)
Current		
Maximum current		± 1A for "e-type" boards
Current range (standard board)		6: 10 µA to 1 A
Lowest accuracy (standard board)		±20 nA on 10 µA range
Lowest resolution (standard board)		0.8 nA on 10 µA range
Current booster	Internal	4 A for VSP only
	External	2, 5, 10, 20, 80, 100 A, 200 A (FlexP0012), 50A (FlexP0060)
Input impedance		1 TΩ (//20 pF)
Voltage		
Compliance		±10 V
Max applied potential		0–20 V adjustable
Resolution		5 µV on 200 mV
Accuracy		< 5 mV on ±2.5 V
Maximum scan rate		200 V/s

Only with EC-Lab®

Modify-on-the-fly

No need to plan experiments – you modify as you go, giving you increased flexibility, easier management of long-term experiments and easier set-ups.

Full Cell Control

Measure (not only control) the voltage between positive and negative electrodes for batteries and fuel cells, just as you do with current.

Temperature Control Server

Manage climatic chambers from EC-Lab®, allowing users to perform automatic cycling with complex temperature profiles.

Z inst

Compensate drift during EIS measurements, for example, battery or specimens for corrosion studies.

Booster Specifications

	2/4/5 A	8/10/20 A	80 A/HCP-803	100 A/HCP-1005	FlexP0060	FlexP0012

MATERIAL SCIENCE

With the largest, most comprehensive range of potentiostats of any manufacturer, you can be sure to find a BioLogic instrument that suits your application.

Here to help.

Online/offline – wherever you are...

BioLogic prides itself in the quality of its potentiostats. We build robust, reliable instruments designed to withstand the rigors of time and the laboratory. But if you do ever encounter a problem with your instrument, you can rest assured that our global support network will be close at hand to help find you a solution quickly and effectively.

And if you just need more information, or perhaps just a little inspiration to help you with your project, you can browse our ever-growing support database of over 100 Learning Centre articles, application/technical notes and support videos at www.biologic.net.

Need high-level EIS measurements? Check out our **Premium Range** at www.biologic.net

Innovation.

Innovation is engrained in our commercial DNA. The first multi-channel computer-controlled potentiostat (MacPile, 1991), Ethernet connectivity and Embedded EIS are just some of the BioLogic innovations helping scientists around the globe. Our high-quality, high-performance instruments have played a pivotal role in leading research projects since 1983.
